

Over 40 million school children in Africa have access to safe drinking water thanks to

Aquatabs Flo®

Water Purification Unit

Water disinfection Unit for
Human Drinking Water

Key Features and Benefits

- Maintenance Free
 - No Power Required
 - Easy to Install & Use
- Affordable
 - 24 hr Residual Activity
 - Disinfects and Protects

Aquatabs Flo is a water treatment system for purifying water. Manufactured in Ireland, the Aquatabs Flo is installed simply and inexpensively into a holding tank to purify drinking water.

Aquatabs Flo kills microorganisms in water to prevent cholera, typhoid, dysentery, legionella and other water borne diseases.

Aquatabs Flo disinfects all water in the piped system, ensuring it is safe to use.

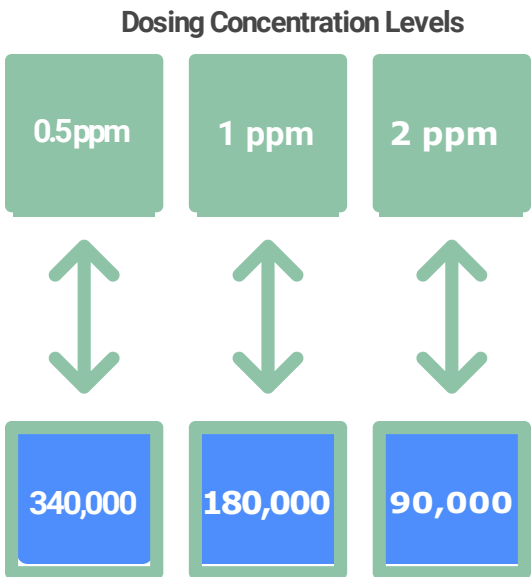

This inexpensive and easy to install unit is activated on the flow of water with no power required.

Pre-set to disinfect 90,000 litres @ 2 ppm. The unit can be adjusted to reduce the level of chlorine, sufficiently dosing water at the required strength. Tablets are visible through the unit which makes it easy to identify when the unit needs to be replaced.

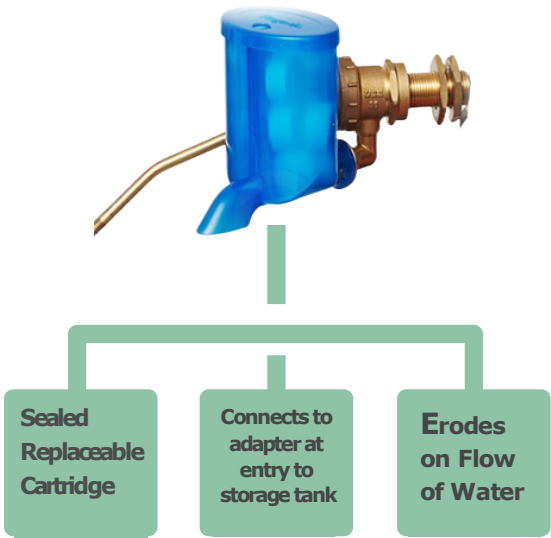

- By simply splitting the water at entry point the chlorine level can be reduced
- Untreated water and treated water mix in the tank
- 50% of water through Flo cartridge: 180m³ @1ppm > 40 litres per minute
- 25% of water through Flo cartridge: 340m³ @ 0.5ppm > 80 litres per minute
